An Unequaled Selection

Since 1920, the Clipsal name has been synonymous with electrical accessories of the highest quality.

Today, our selection of domestic power points and switches is unequalled - from old time favourites like Heritage to the superb new Slimline and Eclipse.

SC2000 Slimline

A classic, sliced extra thin

At first glance, Slimline looks exactly like our C2000 Classic Series switches and sockets. Viewed from the side however, it's a completely different story.

Clipsal has taken a Classic and sliced it extra thin! The result is Slimline, a range of switches and sockets that are only 4mm thick (or should we say thin) making them the thinnest switch plate in the world.

For many years, architects, builders and interior designers have been requesting slim switches that will blend into the wall surface.

Previously, the only option was the more expensive metal plate switches. With Slimline, there is a comprehensive range that is unique but still looks at home when used with regular C2000 Classic products.

A range of metal plate covers are available in the Slimline Range too. They are sure to add a touch of class at a fraction of the cost.

*For information on how the Slimline Range can be used for C-Bus and HomeMinder applications turn to page 15.

SL2000 Eclipse

A work of Art

Over 80 years of evolution has kept Clipsal electrical products at the cutting edge of technology.

Little surprise then, that the new Eclipse Range of switches and sockets offers the thinnest switch plates in the world.

With a remarkably thin 4mm profile, they are up to 60% thinner than others.

It is this understated design that truly distinguishes the Eclipse Range from our other products on offer. The sleek elegance of Eclipse rests smoothly on any surface to ensure a slim and highly fashionable finish.

As with Slimline, a range of metal plate covers are available in the Eclipse Range too. They are sure to add a touch of class at a fraction of the cost.

Switch and socket innovation has never looked this good.

*For information on how the Eclipse Range can be used for C-Bus and HomeMinder applications turn to page 15.

C2000 Classic Series

Nothing outclasses a classic

The smooth curves and sleek lines of the C2000 Classic Series reflect the latest interior design trends. Remarkable and affordable, C2000 features a level of quality and elegance that you would expect from electrical accessories costing much more.

The choice of colours and finishes available with C2000 is quite outstanding. There are metal cover finishes, moulded covers and C-Graphic patterned covers.

As covers and gridplates are interchangeable, you can create combinations to match the particular décor theme you are trying to achieve.

*C2000 Classic Key Input Units are also available for use with the C-Bus Energy Management System.

C-Graphic Finishes

A new look inspired by nature

Technology has not only seen rapid advances in the electrical side of products but also in the finishes that are available.

This can be seen in our new C-Graphic Range of finishes that enables you to create some stunning decorative effects.

The C-Graphic process makes it possible to simulate common design materials like wood grain and marble in economical hard wearing plastic.

C-Graphic finishes are available for use with our C2000 products only. The following finishes are available to order:

<i>C-Graphic Finishes</i>		
<i>Colour Description</i>		<i>Ordering Code</i>
Mahogany Wood		WM
Alpine Green Marble		MG
Brazilian Black Marble		MB
Ajax White Marble		MW
Bird's Eye Wood		WB

2000 Series

The power and the fashion

The 2000 Series continues its dominance as Australia's best selling range of domestic electrical accessories.

Manufactured in high gloss impact resistant polycarbonate, the 2000 Series incorporates surrounds that simply clip onto the grid assemblies.

The beauty of the 2000 Series is that all surrounds and grid assemblies are totally interchangeable to suit your exact requirements.

Surrounds cleverly hide all mounting screws and can be easily removed to enable painting or papering right up to the edge of the grid assembly.

Multigang surrounds are available in polycarbonate material up to 4 gang (vertical) or 3 gang (horizontal).

Available in a full range of decorator moulded colours and metallic surrounds, there's one to suit every colour scheme.

*2000 Series Key Input Units are also available for use with the C-Bus Energy Management System - see page 15.

M2000 Matisse Switches

Switches with the European touch

Nowadays, many electrical accessories reflect the latest European trends. The Clipsal Matisse Range of switches is a great example of this. Like the famous artist of the same name, these switches display a sense of unique style and bold design.

Matisse offers a choice of one, two and three gang switches, with or without inbuilt neons. Dimmers in standard and low voltage are also available. All models suit standard mounting accessories. The gridplates are compatible with surrounds from the innovative Clipsal 2000 Series too.

Which means you can create your own combinations using deep base multigang, metal or coloured 2000 Series surrounds.

The large actuator makes the switches easy to use. Plus the high gloss finish and impact resistant design make them easy to care for.

P2000 Prestige Range

An all time classic with a little added jazz

For many years, the Prestige Range was considered the ultimate in functional design, with its large switch surface of particular benefit to those with physical or visual impairments. Now we've redesigned Prestige with as much emphasis on beautiful form as practical design.

The result is Prestige P2000, with streamlined bevelled edges and a generally softer appearance.

Prestige P2000 is available in a choice of plate sizes, in either moulded colour or metal plate finishes. Covers are easily removed, either to allow painting or papering right up to the edge of the grid assembly, or for interchanging with other covers for a brand new décor look.

Metal Plate Range

The elements of beautiful design

The Clipsal Metal Plate Range offers almost unlimited possibilities. The stainless steel switches and power outlets, for instance, look superb in today's stainless steel kitchens, while brass models beautifully complement more traditional décor.

Aesthetically stunning and brilliant in design and durability, the Metal Plate Range will add a touch of class to both domestic and commercial décor.

The largest metal plate range available in Australia, Clipsal offers a choice of lacquered polished brass, anodised aluminium and stainless steel finishes. Three plate styles are also available:

- A - curved,
- B - flat, and
- C - with rounded corners.

*Metal Plate Key Input Units are also available for use with the C-Bus Energy Management System.

Heritage Range

Golden oldies in tune with today

The Heritage Range superbly brings together old world charm with the technology of today. These switches and sockets are the perfect answer for those wishing to renovate an older style home or to complement the décor of a new Federation style dwelling.

Unlike toggle switches of the past, Clipsal Heritage offers the safety standards, reliability and materials of today. They are even adaptable to suit modern appliances such as TVs, antennas, faxes and computers.

All metal features have been lacquered to withstand moisture and maintain their lustre. The choice of popular all metal "shallow base" versions are available as well as porcelain base versions in colours of White Electric and Black.

Capture the timeless appeal of the Heritage Range, with covers to suit your style.

The sheer elegance of Polished Brass

Polished Brass was the original metal cover in the Heritage Range, and because it was designed as an authentic match to the switches and sockets of the 1920s, it is the perfect choice for those who want to recreate a traditional look throughout their home.

The old world charm of Antique Brass

These antiques are sure to become some of your favourite collectables. The quality old world finish, unique to the Clipsal Heritage Range, will give your home a lovely sense of warmth and style.

The rustic beauty of Florentine Bronze

Boasting Michelangelo as its most famous son, Florence is renowned as Italy's capital of art and architecture. Inspired by this Renaissance city, we've applied the same rustic beauty to a range of Heritage covers and given it the name Florentine Bronze.

Go art deco with classic Chrome

Until now, finding a suitable range of switches, sockets and accessories to suit the art deco era has been almost impossible. With Clipsal Heritage in Chrome, you can go retro and coordinate your switches, power outlets and accessories with your art deco furnishings.

Timber provides the perfect finish

To complement the Heritage Range of switches and sockets there is also a selection of square, round, oval, and rectangular mounting blocks. Choose the look you want: Cedar Finish, Raw Pine, or with an Undercoat Finish ready to paint and match existing décor.

Standard Range

Setting the standard for over 20 years

The Clipsal Standard Range of Flush Switches and accessories has been a firm favourite for many years, and with good reason. With pure, uncluttered styling and timeless lines, Clipsal's Standard Range has stood the test of time.

These accessories make it easy to update or replace switches in thousands of Australian homes built in the 1970s and 80s that already feature Standard Range products.

Now however, there is a greater choice of economical flush switches and accessories than have ever been available before.

The Standard Range offers a multitude of standard or decorator colours that vary from subtle tones to bold colours that really make a statement.

Clipsal C-Bus Compatible Accessories

Technology at your fingertips

The Clipsal C-Bus system can be easily installed in homes to become the heart of a sophisticated home automation system. Home automation lets people control almost everything in the home through automatic scheduling. Control is easy using simple buttons, a touch-sensitive screen, a telephone from anywhere in the world, the Internet or a standard web browser.

C-Bus can also provide the ultimate flexibility in switching and dimming control in commercial and industrial applications. Functions can be added, removed, moved, or changed whenever you want from any point in the network and without cumbersome hard wiring.

The popularity of these systems has seen a demand for compatible electrical accessories that are attractive in form as well as functional in design.

To cater for this demand we have designed Keypad Units for use with C-Bus and Clipsal HomeMinder in our popular Metal Plate, 2000 Series, C2000 Classic Series, SL2000 Eclipse Range and SC2000 Slimline Range. Covers in these styles are available blank, with labelling engraved (for C2000, SL2000 and SC2000 models only) or with labelling windows.

*For more information on either C-Bus or Clipsal HomeMinder contact Clipsal Integrated Systems: (08) 8269 0560.

Colour and finish options for power points and switches

All Clipsal accessories are available in a range of colours and finishes to suit most decorating needs.

The following charts show the colours and finishes available in each range.
